## DETAILED ACTION

### *Election/Restrictions*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-4, drawn to an apparatus for assisting in filling propellant into a container space, classified in class 141, subclass 18.
  - II. Claims 5-9, drawn to an apparatus for assisting in filling product into a bag mounted inside a container, classified in class 141, subclass 20.
  - III. Claims 10-12, drawn to a method for filling propellant and product into an aerosol container, classified in class 11, subclass 003.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions II and I are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as the apparatus can be used to fill propellant into a container without using the indent located on the valve stem as claimed. See MPEP § 806.05(d).

3. Inventions III and I are related as process/method and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the apparatus as claimed can be used to practice another and

Art Unit: 3751

materially different method such as a method that does not required the step of pressure filling the product into the bag.

4. Inventions III and II are related as process/method and apparatus for its practice.

The inventions are distinct if it can be shown that either: (1) the process/method as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process.

(MPEP § 806.05(e)). In this case the apparatus as claimed can be used to practice another and materially different method such as a method that does not required the step of pressure filling the propellant into the container space outside the bag.

5. Because these inventions are distinct for the reasons given above and the search required for Group III is not required for Group II or I, restriction for examination purposes as indicated is proper.

6. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

7. A telephone call was made to Mr. Daniel H. Steidl on 06/01/04 to request an oral election to the above restriction requirement, but could not established communication.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement is traversed (37 CFR 1.143).
